

Hoof-Sol Spray is the ready-to-spray solution to maintain, support, and promote healthy hooves and dermis (NN.U5D5)

Intra Hoof-Sol Spray adheres well and has a long contact time to the skin and hoof.

Free of formalin, antibiotics, or acids

Compatible with all spraying systems

Strong adhesion, even on wet hooves

Aiming with focus by using Hoof-Sol Spray

Spot-spraying on the hoof guarantees long contact time at a lower dosage and adhesion is excellent even on wet skin or hoof. Using Intra Hoof-Sol Spray reduces the waste caused by run-off on the floor.

In recent years, dairy farms have been looking for alternatives to replace or expand the foot bath method. Besides individual spraying sessions with a low-pressure Matabi applicator or other automatic sprayers, whole-herd protocols have been gaining in popularity.

The latter involves using sprayers in milking robots and milking parlors. Intra Hoof-Sol Spray is developed for use in all of these applications and works in all seasons.

Available sizes

20-liter jug Regular

20-liter jug Robot

- ✓ Ready-to-use – no mixing required!
- ✓ Early lameness detection
- ✓ 100% clean solution for every hoof
- ✓ Environmentally friendly
- ✓ Safe to use
- ✓ Easy product detection
- ✓ Optimum viscosity: Regular & Robot optimized

HOW TO APPLY?

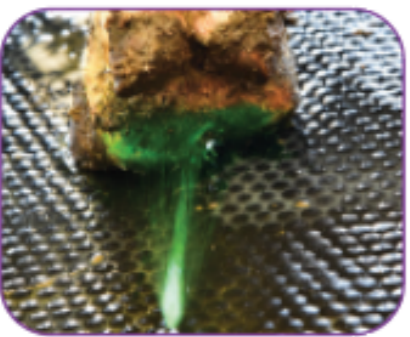

Do not dilute this ready-to-use product.

If necessary, rinse the hooves and interdigital spaces with water to enhance skin contact.

Apply Intra **Hoof-Sol Spray** on the back and in the interdigital spaces of the hind legs using the Matabi low-pressure applicator. For any automated sprayer, we recommend Hoof-Sol Spray Robot.

Use Intra Hoof-Sol Spray once per week. With initial application, twice per week is recommended.

INGREDIENTS:

- ✓ Copper and zinc minerals
- ✓ Aloe plant extract
- ✓ Skin care agents
- ✓ Special adhesion promoters
- ✓ Isopropanol
