

Fly Control on a Roll

Simple, Safe & Effective

- Non-toxic, environmentally sound
- Contains no insecticides or pheromones
- "Captured 92% of available flies." *USDA Tests*
- Easy to install; readily disposable

Knocks Out the Fly Population

Unlike hanging fly ribbons, Sticky Roll™ is naturally attractive to flies. They look for thin surfaces to land on, and they rise with warm updrafts toward the rafters of barns and enclosures. Flies land on Sticky Roll and become entrapped only to attract more flies. Soon the breeding population is virtually eliminated. Sticky Roll should be left in place for the entire fly season to protect against repopulation.

Sticky Roll™ Deluxe Kit with Pulleys

For large enclosures such as barns and arenas we recommend the Sticky Roll Deluxe Kit. The Deluxe Kit consists of 600 or 1000 feet of Sticky Roll Fly Tape, take-up reel, hardware, and three pulleys for installing a network of tape as shown at right.

Non-Toxic, Environmentally Sound

Sticky Roll is a specially designed glue tape on a roll. That's it. No added insecticides or attractants are required. It is environmentally friendly, non-allergenic, won't irritate if touched, and is easily removed with vegetable oil. Used reel is thrown away, flies and all.

Constant Cost-Effective Fly Control

A dramatic alternative to spraying and fogging, Sticky Roll gives effective 24-hour fly reduction, without the constant work and mess.

Safe, effective, non-toxic Sticky Roll has an unlimited range of uses in any covered area where flies are a problem, including stables, dairy barns, swine and poultry enclosures, and animal premises of all kinds. Sticky Roll is also recommended for use in zoos, kennels, refuse areas, bakeries, canneries and factories.

Sticky Roll mounted with Deluxe Hardware Kit. When roll is full, empty roll becomes new take-up reel. Complete instructions are included.

INSTALLATION

For best results, install tape within 6 inches of the ceiling above your fly population and away from breezes. Use the 81 ft. Mini-Kit for a quick reel-to-reel setup. For a large enclosure, use the Deluxe Kit and install a pulley system in a pattern that best fits your space. Some suggestions:
