

DIAMOND
HOOF CARE LTD.

Animal Health

Spraying

- Quality of prevention superior to footbaths
- Contains no antibiotics
- Great adhesion to the hoof
- Safe for the user
- 100% clean solution for every COW
- Contains optimized minerals

Spraying

Hoof problems cause significant economic losses.

Lameness is often perceived as costly when an animal is physically lame and suffering, but in reality, the impact extends far beyond the discomfort of that animal. For example, in dairy cows, longer calving intervals and mastitis prevalence are often related to poor hoof health conditions and indirectly decrease the financial bottom line. Hoof problems also cause extra labor, high culling and increased treatment costs.

Lameness costs can easily run up to \$ 400 annually per dairy cow.

Why wait any longer to start using Hoof Sol Liquid?

Intra Hoof-Sol Liquid is specifically designed for maintaining hoof care in the whole herd. Prevention methods like footbaths will show a better performance and cost reduction when **Hoof Sol Liquid** spraying sessions are incorporated into your hoof care program. Minerals in the Hoof-Sol products are designed to be more stable and soluble than traditionally used minerals. The **Hoof-Sol Liquid** spraying method has the following advantages:

- **Early lameness detection** - More focus on hooves with weekly spraying sessions
- **100 % clean solution** – Each hoof gets clean product that is not contaminated by other cows' hooves.
- **Environmentally friendly** – requires less product compared to a foot bath method
- **Safe to use** – No antibiotics
- **Easy product detection** – the stickiness and green color ensure that all hooves are done

The use of the **Matabi applicator** is recommended for the best spraying experience with the **Hoof-Sol Liquid**. The applicator is built of durable parts and has a consistent usage reputation.

We recommend using our **Hoof-Sol Bath** in conjunction with the weekly spraying sessions to optimize hoof health management.

Cows with lameness issues need special care and attention. Use a professional hoof trimmer to treat your cows before implementing a spraying and/or foot bathing protocol.

How to use Hoof-Sol Liquid :

1. Use the head lockers in the feeding alley or the milking parlor to securely hold the animals. Works great in stanchion barns as well.

2. If necessary, rinse the hooves and interdigital spaces with water to enhance skin contact.

3. **Premium coverage and results: Apply weekly @ 50% solution.** Optional alternative: Use a reduced dilution (20-40% Hoof Sol Liquid) for weekly follow up sessions to maintain hoof health.

4. Spray Intra Hoof-Sol Liquid on the back and in the interdigital spaces of the hind legs using the Matabi low pressure applicator.

Mixing tip :

- Always use **COLD** water to prepare the **Hoof Sol Liquid** solution.
- Use the entire contents of the jug when preparing the solution in a large mixing pail.
- Initial and occasional stirring of the **Hoof Sol Liquid** solution is very important to ensure a satisfactory spraying pattern.
- Monthly rinsing of the applicator with hot water is advised to ensure long lasting performance.

Ingredients :

- Copper and zinc minerals
- Aloe plant extract
- Agents to care for the skin
- Special adhesion promoters
- Isopropanol

Available sizes:

- 10 Liters
